

# WE'VE GONE GREEN™

NOW USING ENVIRONMENTALLY-FRIENDLY  
WATERBORNE PAINT FROM PPG.

ENVIROBASE®  
HIGH PERFORMANCE

**We recommend that you follow these simple precautions in the first few months of your new refinish work:**

**In The First 90 Days...**

- Do not wax or polish the vehicle – this will allow the finish to dry and harden completely. (Do not use silicone-containing waxes or polishes.)

**In The First 30 Days...**

- Do not use a commercial car wash. Stiff brushes or sponges could mar the finish and damage the surface. Wash the vehicle by hand with cool water and a very mild car wash solution. Be sure to use a soft cloth or sponge.
- Wash the vehicle in the shade – never in the sun.
- Do not “dry wipe” the vehicle – always use clean water. Dry wiping could scratch the finish.
- Extreme heat and cold are to be avoided. Keep the vehicle parked in the garage or shade whenever possible.
- Do not drive on gravel roads. Chipping the finish is easily done in the first 30 days.
- Do not park under trees which drop sap or near factories with heavy smoke fallout. Sap and industrial emissions mar or spot a freshly painted surface.
- Trees are also likely to attract birds. Bird droppings have a high acid content and will damage a freshly painted surface. Droppings should be washed off as soon as possible.
- Do not spill gasoline, oil, antifreeze, transmission fluid or windshield solvent on the new finish. If you do... IMMEDIATELY rinse off with water. DO NOT WIPE.
- Do not scrape ice or snow from the surface. Brush off the loose material with a soft snow brush.

Please put this in your glove box for future reference.
